

PLASTOWAX-R425

PRODUCT DESCRIPTION

Plastowax-R425 is a microcrystalline, protective wax against sun and ozone.

FIELD of APPLICATION

Plastowax-R425 can be applied as ozone-protective wax in rubber industry. Coated onto the surface of rubber, Plastowax-R425 creates a complete protective layer that shows stability between 30-40 °C. Plastowax-R425 brings the antioxidants used beside upon the layer, making the resistance of rubber against ozone much more effective.

Application technology:

Subject to composition 1-6 phr of material can be dosed into mixtures based on general rubbers (NR, SBR, BR, NBR, CR). Mainly light-coloured rubber articles, extruded articles and technical moulded, cable covering, microcellular rubbers are used at medium-high service temperatures. Plastowax-R425 meets the requirements of test specifications at ozone chamber temperatures of abt. 30 °C. The mixing temperature should exceed the melting point of the Plastowax-R425.
